What is the entrée.NET Language Translator Service

Our new Language Translator Service will automatically translate all your **Class Names**, **Item Description line 1**, **Item Description line 2** and **Item Notes** into your choice of over 50 of the most popular languages. Having language translations in **entrée.NET** allows customers entering orders online to view your catalog in their native language.

Once activated your Language Translator license allows you to select two languages for use in **entrée.NET**. You will be billed \$50 monthly for the service as long as it is activated.

You can easily cancel the service whenever you like, just click the **Cancel Service** button in the **General** screen of the **Translation** tab.

Periodically the translation process will have to be rerun for the languages you have selected to add any new items from your catalog and update item descriptions, classes and notes.

Note: The translation process will not be perfect and some English words may not be changed.

How to Activate the entrée.NET Language Translator Service

1. The System Administrator must login to **entrée.NET** to activate this new service.
2. Click the new **Translation Tab** that will be in the **entrée.NET** main menu.

3. When you first click the **Translation Tab** a message box will display explaining the Language Translator Service and the monthly fee. Click **OK** to close the Information box.

4. Click the **Activate Service** button on the **Translation Tab** to begin the activation process.

5. The **Activate Service?** dialog box will display.

6. Respond **Yes** to activate the Language Translator service.

NECS will immediately have the Language Translator service available in entrée.NET. An email notification will be sent to you to confirm activation of the Language Translator service and the monthly fees involved.

7. Next click the **Language** button on the left to open the language selection screen which lists the available languages.

8. Check the box for the one or two languages to select them. Your Translator Service license limits you to **two** languages.

Home	Customer Setup	Salesperson Setup	Manager Setup	Messages	Translation	Specials	Website	Prospects	Reports	Settings	About	Sign Out
 General  Language	Action	Language	Native name	Flag								
	☐	Afrikaans	Afrikaans									
	☐	Albanian	Shqip									
	☐	Arabic	العربية									
	☐	Belarusian	Беларуская									
	☐	Bulgarian	Български									
	☐	Catalan	Català									
	☐	Chinese (Simplified)	中文(简体)									
	☒	Chinese (Traditional)	中文(繁體)									
	☐	Croatian	Hrvatski									
	☐	Czech	Česky									
	☐	Danish	Dansk									
	☐	Dutch	Nederlands									

9. Now click the **General** button. The languages you selected are listed in the selected languages box in the center of the screen with a status of **"Not applied yet"**.

10. Next you will check the boxes for the fields you would like to be translated into your chosen languages.

In this section the number of records that will be translated for each field in your database is displayed.

Fields to select from are:

- **Description Line 1**
- **Description Line 2**
- **Class Name**
- **Notes**

Add Task to Translation

Translation summary

Note: The information in these fields comes from the main **entrée** system. So when the information in the main **entrée** system changes and is exported to **entrée.NET** you will need to run this translation process again for your selected languages to convert the new data.

11. Once your fields are selected you will run the translation process by clicking the **Add Task to Translation** button.

12. Once you click the **Add Task to Translation** button the **Server answer** message box will be displayed.

Click **OK** to run the language translation process. Translating and loading the fields you have selected should take about 5 minutes or less depending on how much data must be translated.

13. While the language translation process is running look in the **Translation Summary** section of the screen and you will see that the value of the **Last Updated** field for the selected languages will be **Pending**.

The number of Descriptions, Classes and Notes that need to be translated will be shown in the **Need to Translate** area in **red** text.

Translation summary							
Language	Last Updated	Translated			Need to translate		
		# Descriptions	# Classes	# Notes	# Descriptions	# Classes	# Notes
Italian	Pending	0	0	0	104	28	0

Page 1 of 1 Records 1 - 1 of 1

14. Once the process has completed the **Translation Summary** section **Translated** area will show how many fields were successfully translated for each language in **green** text.
The **Last Updated** field will display the date of the translation.

Translation summary				
Language	Last Updated	Translated		
		# Descriptions	# Classes	# Notes
Italian	07/05/2012	104	28	0

15. When the translation of your fields is done the **Inventory's descriptions available for the following languages** section at the top of the screen will list the languages available.

In the example below Italian has been listed in the box which shows the translation process has been completed.

What the Customers will see in entrée.NET

- **Language Tab / Menu:** If your customer has an account when they login there will be a new **Language** drop down menu. They will use it to select from English and any of the two other languages you choose for translation.

My Account **Catalog** Standard Order Quick Entry Specials Order Guides Reports Help Sign Out Language Italiano

View: Loading ... Search: Enter search keywords Requested Delivery Date:

Once the customer makes a language selection from the Language drop down menu they will see the following:

Language English

Chinese (Traditional) / 中文(繁體)

English

Italian / Italiano

• Catalog:

- When view **By Class** (right) is selected the class information will be displayed in the selected language.
- When view **All Items** (below) is selected the item description and classes will be displayed in the selected language.

Note: In the Catalog screen translation below "ROAST BEEF" was not translated.

Remember this is not a perfect process but most words will be translated.

Refreshing Translation Data

Periodically the translation process will have to be rerun for the languages you have selected to refresh new data. Any new items, modifications to item notes, descriptions or classes that are imported from the main **entr  e** system will need to be translated. The process to update the translations in your catalog for this newly imported data follows.

Note: You are not allowed to change the languages you previously selected for translation. If you have only one language selected, you can add your second language at this time. If you have two languages you must refresh the data using those same two languages.

The Translation Data Refresh Process

1. When you first open the **Translation** tab you will see:

- The languages available in your system listed in the **Inventory's descriptions available for the following languages** section at the top.
- The **Translation Summary** section **Translated** area will show in **green** text how many fields were translated for each language the last time the translation was run.
- The **Last Updated** field displays the date of the last translation of your data.

The screenshot shows the 'Translation' tab in a software application. The top navigation bar includes 'Home', 'Customer Setup', 'Salesperson Setup', 'Manager Setup', 'Messages', 'Translation' (active), 'Specials', 'Website', 'Prospects', 'Reports', 'Settings', 'About', and 'Sign Out'. On the left, there are icons for 'General' and 'Language'. The main content area has a 'Cancel Service' button at the top. Below it, the section 'Inventory's descriptions available for follow languages' shows a text box containing 'Chinese (Traditional), Italian'. The next section, 'Please select fields which should be translated for selected languages', contains four checkboxes: 'Description Line 1 - 103 records' (checked), 'Description Line 2 - 1 records' (unchecked), 'Class Name - 28 records' (unchecked), and 'Notes - 1 records' (unchecked). Below these is an 'Add Task to Translation' button. The 'Translation summary' section features a table with the following data:

Language	Last Updated	# Descriptions	Translated			Need to translate		
			# Classes	# Notes	# Descriptions	# Classes	# Notes	
Chinese (Traditional)	07/06/2012	104	28	0	0	0	1	
Italian	07/05/2012	104	28	0	0	0	1	

2. Click the **Language** button. In the language selection screen you must **un-check** then **re-check** the same languages you translated before to re-select them.

The screenshot shows the 'Language' selection screen. The top navigation bar is the same as the previous screenshot. On the left, there are icons for 'General' and 'Language'. The main content area has a table with the following data:

Action	Language	Native name
☐	Indonesian	Bahasa Indonesia
☐	Irish	Gaeilge
☒	Italian	Italiano

Refreshing Translation Data

3. Click the **General** button and you will see:

- **Inventory's descriptions available for the following languages** section at the top says **"No available languages"**.
- Your languages are listed in the selected languages box in the center of the screen with a status of **"Not applied yet"**.
- The **Add Task to Translation** button has been activated.
- The number of new Descriptions, Classes and Notes to be translated during the refresh process are shown in the **Need to Translate** area in **red** text.

The screenshot shows the 'Translation' tab in a software application. The 'General' button is selected in the left sidebar. The main content area has a header 'Inventory's descriptions available for follow languages' with a box below it stating 'No available languages.' Below this is a section 'Please select fields which should be translated for selected languages' with four checkboxes: 'Description Line 1 - 103 records' (checked), 'Description Line 2 - 1 records' (unchecked), 'Class Name - 28 records' (unchecked), and 'Notes - 1 records' (unchecked). Below these is a box showing 'Chinese (Traditional) - Not applied yet;' and 'Italian - Not applied yet'. At the bottom is an 'Add Task to Translation' button. A 'Translation summary' table is at the bottom.

Language	Last Updated	# Descriptions	Translated			Need to translate		
			# Classes	# Notes	# Descriptions	# Classes	# Notes	
Chinese (Traditional)	07/06/2012	104	28	0	0	0	1	
Italian	07/05/2012	104	28	0	0	0	1	

4. Now check the boxes to select the fields to be translated in the **Please select fields which should be translated for selected languages** section.

5. Click the **Add Task to Translation** button to start the data translation process.

This screenshot is similar to the previous one, but the checkboxes in the 'Please select fields which should be translated for selected languages' section are now all checked: 'Description Line 1 - 103 records', 'Description Line 2 - 1 records', 'Class Name - 28 records', and 'Notes - 1 records'. The 'Add Task to Translation' button remains at the bottom.

Refreshing Translation Data

6. The **Server answer** message box will be displayed. Click **OK** to run the language translation process. Since most of your data has already been translated before this should be very quick.

As you can see in the background screen all your fields have been listed with the languages in the selection area.

7. When the translation data refresh is done you will see:

- The **Inventory's descriptions available for the following languages** section at the top of the screen will list your languages as available again.
- The **Add Task to Translation** button has been deactivated.
- The **Last Updated** field will now change and display the date of the latest translation of your data from this refresh data process.
- The **Translation Summary** section **Translated** area will update the values to show in **green** text how many fields are translated.

A screenshot of the 'Translation' tab in a software application. The top navigation bar includes 'Home', 'Customer Setup', 'Salesperson Setup', 'Manager Setup', 'Messages', 'Translation' (selected), 'Specials', 'Website', 'Prospects', 'Reports', 'Settings', 'About', and 'Sign Out'. On the left, there are icons for 'General' and 'Language'. The main content area has a 'Cancel Service' button at the top. Below it is a section 'Inventory's descriptions available for follow languages' with a text box containing 'Chinese (Traditional), Italian'. Another section 'Please select fields which should be translated for selected languages' contains the same list of fields as in the previous image. Below this is an 'Add Task to Translation' button, which is now disabled. At the bottom is a 'Translation summary' section with a table. The table has columns for 'Language', 'Last Updated', and a group of columns for 'Translated' and 'Need to translate'. The 'Last Updated' column now shows the date '07/19/2012' for both languages, highlighted with a red box. The 'Translated' columns show counts in green text, and the 'Need to translate' columns show counts in red text.

Language	Last Updated	Translated			Need to translate		
		# Descriptions	# Classes	# Notes	# Descriptions	# Classes	# Notes
Italian	07/19/2012	104	28	1	0	0	0
Chinese (Traditional)	07/19/2012	104	28	1	0	0	0

Translator Service Cancellation

You can cancel the Language Translator Service whenever you like. An email will be sent to NECS to cancel your service. **entrée.NET** will automatically deactivate the language translator features when the **Cancel Service?** confirmation has completed.

Reminder: You can re-activate the Language Translator Service at any time.

Follow these steps to cancel the Language Translator Service:

1. Click the **Cancel Service** button in the **General** screen of the **Translation** tab.

2. The **Cancel Service** confirmation dialog box will display. Click **Yes** to confirm or **No** to cancel deactivation of the Language Translator Service.

3. An email will be sent to NECS to cancel your service and **entrée.NET** will deactivate the Language Translator Service features automatically.
